ABSTRACT OF THE DISCLOSURE

15

          A turbojet thrust reverser has two doors that are  
displaceable between a reverser open position and a  
reverser closed position, each door being controlled by a  
respective electronic control unit connected to a FADEC,  
20    and each door having a respective locking device for  
locking the position of the door associated therewith.  
Each locking device can be unlocked solely on receiving  
orders that come simultaneously from both electronic  
control units.
